Supersedes 8/18/20 – Release of the bizhub 750i

The Technical Education department of Konica Minolta Business Solutions U.S.A., Inc. is pleased to present the bizhub C750i Technical Differences Training.

The introduction of the bizhub C750i completes our color line-up of office MFPs. Designed to be simple, convenient and secure, the new i-Series features an all-new user interface with a fresh, contemporary look. The simple and intuitive menu layout is built to minimize the number of touches and complete jobs faster.

Service professionals certified on the C658 or C650i can complete the [bizhub C750i Technical Differences WBT](#) and be certified on the C750i. Service professionals certified on the C750i are certified on the 750i.

The estimated completion time is 30-minutes.

This technical training can also be located using the following course codes in the Find Learning tile within Konica Minolta Learning; TC750IDIFWBT

Service professionals new to these models. The C750i Certification has been added to the [bizhub C750i, C650i, C360i, MFX-C6595i Series Theory Virtual Classroom](#).

- Note: Active Enrollment in, or previous completion of, Office Products Foundations Virtual Technical Classroom is required.
- Equipment is *not needed* during the 5-days of class.
- Certification will not be provided at the end of this training. This course does not provide certification until completion of hands-on labs are confirmed. This may occur at your location if ALL equipment is available for disassembly, adjustments, etc. or you attend an abbreviated 4-day course at one of the Technical Training Centers at a date to be determined in the near future.

Subject: Startup Parts
bizhub 750i:

001

The following pages contain the recommended startup parts to support an initial placement of the models above. This is not a compilation of all parts that will be needed; it is a suggested list of parts and supplies that could adversely affect machine operation if they are not replaced at the scheduled intervals.

Consult the current parts catalogs and bulletins for additional parts and changes that may be made from time to time.

Use this list as an aid in preparing an initial parts inventory for these models. Parts and supplies can be ordered using standard ordering procedures.

Local Effects: see Chronic Toxicity or Long term Toxicity

Chronic Toxicity or Long Term Toxicity:

In a two-year inhalation study of chronic toxicity and carcinogenicity using a typical toner in rats, there were no lung changes at all in the lowest exposure level (1mg/m³), the most relevant level to potential human exposures. A minimal to mild degree of fibrosis was noted in 22% of the animals at the middle exposure level (4mg/m³), and a mild to moderate degree of fibrosis was observed in 92% of the rats at the highest exposure level(16mg/m³). The lung changes observed in the higher exposure groups are interpreted in terms of "lung overloading", a series of generic responses to the presence of large quantities of respirable, insoluble and relatively benign dusts retained for extended time periods in the lungs. Lung tumor frequency was unchanged among rats exposed to toner at the three exposure levels, and for air-only control rats.

Carcinogenicity

The IARC reevaluated carbon black as a Group 2B carcinogen (possible human carcinogen). This evaluation is given to Carbon Black for which there is inadequate human evidence, but sufficient animal evidence. The latter is based upon the development of lung tumors in rats receiving chronic inhalation exposures to free carbon black at levels that induce particle overload of the lung.

Studies performed in animal models other than rats have not demonstrated an association between carbon black and lung tumors. Moreover, a two-year cancer bioassay using a typical toner preparation containing carbon black demonstrated no association between toner exposure and tumor development in rats.

Local Effects: see Chronic Toxicity or Long term Toxicity

Chronic Toxicity or Long Term Toxicity:

In a two-year inhalation study of chronic toxicity and carcinogenicity using a typical toner in rats, there were no lung changes at all in the lowest exposure level (1mg/m³), the most relevant level to potential human exposures. A minimal to mild degree of fibrosis was noted in 22% of the animals at the middle exposure level (4mg/m³), and a mild to moderate degree of fibrosis was observed in 92% of the rats at the highest exposure level(16mg/m³). The lung changes observed in the higher exposure groups are interpreted in terms of "lung overloading", a series of generic responses to the presence of large quantities of respirable, insoluble and relatively benign dusts retained for extended time periods in the lungs. Lung tumor frequency was unchanged among rats exposed to toner at the three exposure levels, and for air-only control rats.

Carcinogenicity

The IARC reevaluated carbon black as a Group 2B carcinogen (possible human carcinogen). This evaluation is given to Carbon Black for which there is inadequate human evidence, but sufficient animal evidence. The latter is based upon the development of lung tumors in rats receiving chronic inhalation exposures to free carbon black at levels that induce particle overload of the lung.

Studies performed in animal models other than rats have not demonstrated an association between carbon black and lung tumors. Moreover, a two-year cancer bioassay using a typical toner preparation containing carbon black demonstrated no association between toner exposure and tumor development in rats.
